WORK HISTORY

StudentRND

2013-Present

Program Director

I was responsible for leading the expansion of CodeDay – a series of educational events happening a few weekends a year in multiple cities across the US. I worked to increase the program from 3 events per weekend to 30 in 6 months, and grew revenue for FY2013 to over \$100,000.

To support this growth, I grew our team to 14 part-time Regional Managers and 30 day-of event leads, and created the training programs for each. I also developed internal tools to support both event management and training. Additionally, I designed, developed, and maintained all our customer-facing websites. (StudentRND is a 501(c)(3) non-profit.)

Framebase

2012-2013

Co-Founder; Engineering/Developer Evangelism

I co-founded Framebase, a Y Combinator- and venture-backed startup which aimed to simplify the way developers work with video in web and mobile applications. I was responsible for the development of the website, control panel, Javascript and web APIs, and transcoding architecture. I also ran our developer evangelism program, which drove a large percent of our growth. As the co-founder of the company, I also participated in sales and fundraising.
