## WORK HISTORY

**StudentRND**
2013-Present

### Program Director

At StudentRND, a 501(c)(3) non-profit, I was responsible for leading the expansion of CodeDay – a series of 24-hour programming events ("hackathons") which happen on a few weekends a year in multiple cities across the US. I worked to increase the program from 3 events per weekend at the start of my employment to 30 events per weekend, and grew revenue for FY2013 to over $100,000.

To support this growth, I grew our team to 14 part-time Regional Managers, each responsible for sponsorships and promotions for several events, and 30 Tech Evangelists, responsible for running each event, and created the training programs for each. I also developed internal tools to support both event management and training. Additionally, I designed, developed, and maintained all our customer-facing websites.

**Framebase**
2012-2013

### Co-Founder; Engineering/Developer Evangelism

I co-founded Framebase, a Y Combinator- and venture-backed startup which aimed to simply the way developers work with video in web and mobile applications. At Framebase, I was responsible for the development of our main website and control panel, as well as our Javascript and web APIs and transcoding architecture. I also ran our developer evangelism program, responsible for driving a large number percent of our growth. As the co-founder of the company, I also participated in sales and fundraising, and was a part of Y Combinator's summer 2012 cohort.
